

Corner Cube Technology (Engineer Grade)

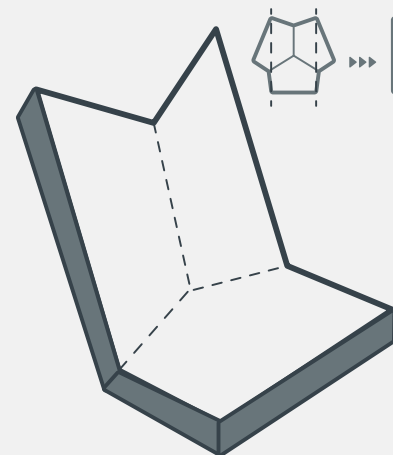

The incident light is lost in the corners.
(triangular angle reflector, tetrahedron shape)

Truncated Corner Cube Technology (High Intensity Grade)

The inefficient corners are removed.
(an obtuse tetrahedron remains)

Full Cube Technology DG³ (Diamond Grade)

The optimum part of the microprism with the most effective reflective performance is used (the so-called full cube).
These individual elements can be lined up on the film surface without any loss of space
